Tokenomics

This document outlines the tokenomics of the ERC-20 token that also powers the DAO described in the "DAO Framework - Hybrid Governance" document. It focuses on the technical characteristics and utility of the token, named "NOWAR" with the symbol "$NOWAR", within the DAO ecosystem, including a milestone-based unlocking mechanism for the DAO treasury.

1. Token Name and Symbol:

- **Name:** NOWAR
- **Symbol:** $NOWAR

2. Token characteristics:

- ERC-20: Ensures compatibility with project's objectives.
- **Total Supply:** 1,000,000,000 $NOWAR
- Decimals: 18

4. Token Allocation:

Allocation Category	Percentage	Total Tokens	Purpose
Marketable	50%	500,000,000 $NOWAR	Public sale to raise funds, attract users, and ensure liquidity.
Initial liquidity	10%	100,000,000 $NOWAR	Reserved for maintaining healthy liquidity on decentralized exchanges, enabling easy trading of the token.
Marketing & Development	20%	200,000,000 $NOWAR	Funding for promotional campaigns, community growth initiatives, and DAO platform development.
DAO Treasury	20%	4,000,000 $NOWAR	Initially locked, funds are unlocked upon reaching a 5 million market cap milestone.
Total	**100%**	20,000,000 $NOWAR	

5. Token Utility:

- **Membership:** $NOWAR holders are granted membership in the DAO.
- **Governance:** $NOWARs are used for voting on proposals within the DAO.
- **Access to DAO Services:** $NOWAR holders may gain access to exclusive services, platforms, and resources provided by the DAO.
- **Staking & Rewards:** The DAO will implement staking mechanisms that reward $NOWAR holders for holding and actively participating in the DAO.

6. Technical Characteristics:

- **Token Contract Address:** [To be determined after deployment]
- **Decimals:** 18 (Allows for fractional ownership and greater precision in transactions).
- **Transferable:** Yes, $NOWAR can be freely transferred between Ethereum addresses.
- **Burnable:** [To be reviewed in DAO proposals] The token contract may include a burn function to permanently remove $NOWAR from circulation, potentially increasing the value of remaining tokens.

7. Tokenomics Details:

- **Sell Tax:** A 2% tax on all $NOWAR sales is automatically sent to the DAO treasury, ensuring a sustainable funding stream for the DAO's operations.
  Once the DAO platform and staking features are developed and enabled, the tax funds will be evenly distributed to all staking members.
- **Token Release Schedule:** A transparent schedule will be established for a fair release of $NOWAR to the market.
- **DAO Treasury Milestone:** The DAO treasury (200,000,000 $NOWAR) will be initially locked for 6 months. If the NOWAR-DAO is not developed by then, the funds will be re-locked until the DAO's completion.
- **Token Security:** $NOWAR will be deployed with robust security measures, including audits by reputable third-party security firms to ensure its integrity and protect against vulnerabilities.

8. Disclaimer:

This tokenomics document is subject to change as the DAO evolves and community feedback is considered. It provides a framework for understanding the $NOWAR characteristics and its role within the DAO's structure. Please refer to the DAO whitepaper and official communication channels for the most updated information.
